Skills

AI/ML: LangChain, LangGraph, LangSmith, RAG, Vector Database (Pinecone), LLMs (Groq, Ollama, HuggingFace), Prompt Engineering, Tavily, Embeddings

Languages: JavaScript, TypeScript, Python, SQL

Backend: Node.js, Express.js, NestJS, PostgreSQL, MySQL, MongoDB, Redis, Socket.IO, Websockets

Frontend: ReactJS, Html, CSS, Next.js

Cloud & DevOps: AWS, EC2, S3, SQS, Lambda, CloudWatch, Docker, Nginx, PM2, Grafana, Firebase, Render, Vercel

Work Experience

Tech Alchemy, Pune

June 2023 – Present

Software Development Engineer

- Integrated **LLM-powered automation (Groq, Ollama)** into production platforms, using **vector search** for intelligent content retrieval and cutting manual processing effort across internal workflows.
- Resolved data inconsistency between the **event listener** and **presale-analytics service** by introducing an **AWS SQS** message broker layer, buffering events during downtime and eliminating data loss.
- Reduced **API latency** from 60s to 2s via **Node.js worker threads**, and cut response times on million-record datasets using **Redis caching** and optimized **database indexing**.
- Owned production **REST APIs** end-to-end – resolved data consistency across horizontally scaled services, implemented **cross-region replication**, and load tested to sustain **1M+ concurrent users**.
- **Skills:** LangChain, LangGraph, RAG, Pinecone, Groq, Ollama, Node.js, TypeScript, AWS (SQS, EC2), PostgreSQL, Redis, NestJS, MongoDB, ReactJS

Project Work

Multi-Agent AI Assistant:

[Link](#)

Production-ready multi-agent AI assistant with RAG, web search, and conversation memory, delivering a ChatGPT like experience.

- Architected a **multi-agent system** with **LangGraph** featuring a **Supervisor Agent** that dynamically routes queries to **Memory, RAG, and Web Search** agents based on intent.
- Built a **RAG pipeline** ingesting PDF/DOC/TXT files – chunking documents, generating **HuggingFace embeddings**, storing in a **vector database**, and integrating **Tavily** web search as fallback.
- Implemented **session-based memory** for multi-turn context and **tool-calling** logic, powered by **Groq** LLM inference, with **Express** backend and **React** frontend for real-time chat.
- **Skills:** LangChain, LangGraph, RAG, Groq, Ollama, HuggingFace, Tavily, Vector Database, Node.js, Express.js, ReactJS

Web3Toolkit:

[Link](#)

Fault-tolerant Web3 payments platform with real-time notifications and on-chain analytics dashboards.

- Solved inconsistent real-time notifications using a **Redis Pub/Sub** fan-out architecture fed by **MongoDB** change events via **AWS SQS**.
- Maintained a monorepo microservices backend integrating blockchain contracts via **WebSockets, Ethers.js, and Web3.js**.
- Built client **CRM** dashboards for real-time on-chain transactions, revenue, and country-wise participation metrics.
- **Skills:** NestJS, ReactJS, PostgreSQL, SQS, Redis, Socket.IO, Web3.js, MongoDB, JWT

Education

GNIT Kolkata

April 2019 - May 2023

B.Tech. in Computer Science and Engineering

CGPA: 8.45/10

Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, System Design
